The examination is being carried out on the **following application documents**

Description, Pages

2-8	as originally filed	
1	filed in electronic form on	11-09-2018

Claims, Numbers

1-6	filed in electronic form on	11-09-2018

Drawings, Sheets

1/6-6/6	as originally filed

1 The submissions and arguments of the applicant are respectfully appreciated and have been duly taken into account. However the current set of claims shows the deficiencies stated below.

2 Reference is made to the following document; the numbering will be adhered to in the rest of the procedure.

D1 WO 01/43957 A1 (PIRELLI [IT]; CANTU MARCO [IT]; FRISIANI LUCA [IT]; MARCHINI MAURIZIO) 21 June 2001 (2001-06-21)

Claim 1

3 The subject-matter of claim 1 is not novel in the sense of Art. 54 EPC due to the disclosure of D1 (fig. 3 and page 7, line 16-20), due to the following:

3.1 It is noted that the current wording of claim 1 does not require at all that said first and second cords are *different or of different type*, as argued by the representative in his letter.

3.2 Secondly the limitation "without wefts" is very broad and the skilled reader, in view of the normal understanding of this expression in the art of layers used for tires, would conclude that *the plurality of carcass cords is arranged without wefts* in the tire of D1, as required by claim 1. This is clear from fig. 3 and page 7, line 16-20. Even if the configuration of the carcass strips 4a, 4b of D1 was disposed in an endless manner over the tire body as suggested by the representative, such configuration would still not be considered by the skilled person as showing wefts.

3.3 It is furthermore pointed out that it is the plurality of carcass cords, the one which is arranged *without wefts*, and not the ribbon-shaped carcass *ply pieces*, which should not show any weft.

FURTHER PROCEDURE

4 Although it is not at present apparent which part of the application could serve as basis for a new, allowable claim, the Applicant may submit a new set of claims based on matter which he regards as meeting the requirements of the EPC, taking into account the state of the art as cited in the search report, overcoming the deficiencies stated above. The applicant is requested to state in his reply what features make the subject-matter of such a new claim 1 differ from the cited prior art, what the resulting effect of said features is and how the technical problem is thereby solved.

4.1 The attention of the applicant is drawn to the fact that the application may not be amended in such a way that it contains subject-matter which extends beyond the content of the application as filed (Article 123 (2) EPC).
